

Disclaimer

- As with virtually all supplements, statements made have not been approved by the FDA.
- These products are not intended to cure, treat, diagnose or otherwise benefit your pet - per regulation, only pharmaceutical products are permitted to make that claim.
- Results may vary according to the animal's diet and lifestyle.
- These products are not to be used in lieu of, but as a support to, proper veterinary care.
- The amount of time a product must be used before seeing results is heavily dependent on your pet's existing diet and current condition. Generally speaking, minimal results begin to occur between 1 dose and 3 weeks. Maximum results are often not achieved for about 3 months.
- In severe conditions, or conditions where the pet is dependent solely on the effects of the supplement because the diet has not been improved to eliminate processed foods, this time may increase greatly.
- The cleansing response, aka healing crisis, is a process in which your pet's body begins releasing the toxins that have built up in their system over the years. The speed and severity of the cleansing response will vary by individual pet according to their age, diagnosis, lifestyle, severity of symptoms, etc.
- Symptoms of a cleansing response may include: increased shedding, panting, lethargy, excessive water consumption, slightly loose stools, dermatitis, and self-fasting. These symptoms are temporary and transitory. Not every pet will have a cleansing response.

Sourcing is Key

Individually Hand-crafted

Fair Trade for Life Certified Ingredients

Non-GMO

Certified Organic

Kosher

Hand-Selected Harvesting

Zero-Waste Certified Business Ingredients

Small Farmer Supportive

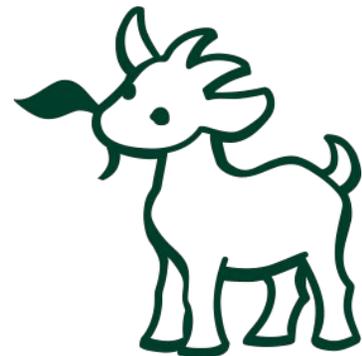

No Artificial or Natural Colors
or other unnecessary junk

NO Fillers, Ever!

NO Preservatives

NO Binders

No Nuts, No Soy, No Wheat, No
Corn... No nothing but medicinal
herbs!

AllerGEEZ

This blend is designed to assist with allergies and immunity. Seventy percent of immunity is said to stem from the digestive system. This blend helps to decrease histamine levels, increase natural Vitamin D levels, increase Vitamin C levels, decrease inflammation and moderate infection and irritation in the system. Triphala helps to tone the intestines.

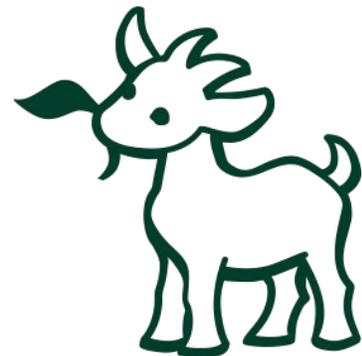

This blend is not designed to help with allergic reactions to acute toxicities such as food poisoning, contamination from synthetic supplements (found primarily in kibble and canned pet foods), pesticides (also often found in kibble and canned pet foods as well as the environment) and other sources.

Ingredients

Wormwood, Proprietary blend of mushrooms (Shiitake, Reishi, Maitake, Chaga), Triphala, Marshmallow, Brahmi, Meadowsweet, Yucca, Frankincense

Dosage & Use

Sprinkle over food or steep as a tea
*Up to 20lbs – ¼ tsp per day
*21-40 lbs – ½ tsp per day
*41-80 lbs – 1 tsp per day
*Over 81 lbs – 2 tsp per day

Root Causes of Allergies

There are several reasons for allergic reactions beyond the scope of sensitivity to specific ingredients.

- Environmental or dietary intolerances
- Systemic inflammation
- **Vitamin D Deficiency & Hormone Imbalances**
- Fungal overgrowth
- **Microbiome Imbalance** (often caused by antibiotic use, inorganic foods, chemical exposure or consumption, etc)
- **Heavy Metal Toxicity**
- Micronutrient (Vitamin/Mineral) Imbalance
- **Vaccinosis**
- **Exposure to certain medications** (particularly flea/tick/heartworm and other antiparasitic medication)
- **Parasites**
- Specific Food Sensitivities

https://herospets.com/blogs/news/root-causes-of-allergies-why-theyre-more-important-than-managing-symptoms?_pos=3&_sid=94ffd91f2&_ss=r

Regarding Long Term Use of AllerGEEZ

Long term use of this supplement is safe but all aspects of the root cause should be considered and addressed during use.

It's important to identify the root cause of allergies to prevent acute imbalances from turning into chronic diseases. Simply avoiding aggravating ingredients and exposures or suppressing symptoms with drugs allows imbalances to continue - often resulting in diseases such as cancer. ***AllerGEEZ is designed to help with the environmental or dietary intolerances, elevated histamine levels, systemic inflammation, parasites, fungus, and minor Vitamin D deficiencies. It's common that more than one cause exists at a time. Resolving all imbalances will resolve the allergy. Resolving only one problem generally will not.***

The most common allergy stimulating ingredients are Chicken (some other poultry.... About 85% of dogs, in my experience, that are allergic to chicken are NOT allergic to other poultry), Chicken Eggs, Wheat and Wheat derivatives, Corn and Corn derivatives, Soy and Soy derivatives, and Rice, and Barley.

However, quite literally any ingredient can cause issues. Sometimes the issue with an ingredient is around its production – for example, synthetic minerals are inextricably contaminated with heavy metals. Extruded kibble products are manufactured with phthalate-rich machinery lubricants to protect the extruder from heat. Glyphosate is often used to desiccate lentils, potatoes and grains. Again, all potential causes of allergies should be addressed simultaneously to achieve resolution.

Medicinal Mushrooms

Reishi

Ganoderma lucidum

Reishi is an immune potentiator and immune modulator, therefore helping to balance and down-regulate an overactive immune system. Reishi contains a high level of the polysaccharide beta-glucan which offers protection against attack from pathogenic microbes and from harmful effects of environmental toxins and carcinogens.

Beta-glucans have the ability to regulate cytokine expression, thus reducing inflammatory, and potentially allergic, responses in the body.

Shiitake

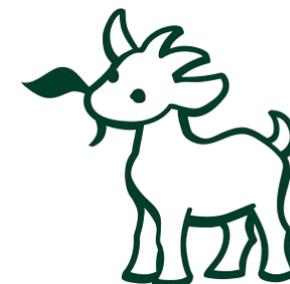

Lentinula edodes

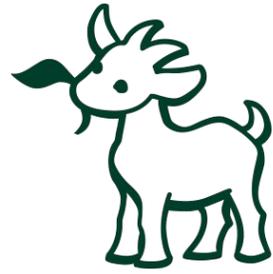

Rich in polysaccharides, polysaccharopeptides, phenolic compounds, proteins, lipid components and terpenoids, Shiitake boosts immune health which improve resistance to allergies.

Because of their natural exposure to sunlight, medicinal mushrooms usually have naturally high levels of Vitamin D2. Vitamin D regulates minerals and is necessary for optimal immune health.

Medicinal Mushrooms

Chaga

Inonotus obliquus

Chaga contains a uniquely high level of Inotodiol which has been shown to stabilize mast cells.

Mast cells are long-living cells that are produced in bone marrow. They are an important part of immune function and help fight infection. When mast cells detect allergens they release histamine into the bloodstream.

Histamine expands blood vessels, causing surrounding tissues to swell and get itchy. Histamine can also create a build-up of mucus in, and thus narrow, the airways.

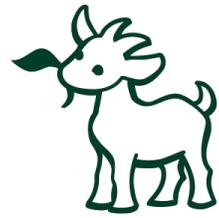

Therefore, Chagas ability to stabilize mast cells has been shown to have a direct beneficial impact on reducing food allergies and even inhibit the bodies [anaphylactic response](#).

Maitake

Grifola frondosa

Contains an array of 1,3/1,6 beta-D glucan compounds which boost immune health, regulate blood sugar levels and improve insulin resistance. Like Reishi, Maitake can impact the expression of cytokines in macrophages which can reduce inflammation and allergic responses to internal and external stimulants.

Triphala

Amalaki, Bibithaki, and Haritaki fruit blend

Triphala is a combination of 3 Ayurvedic herbs which help improve digestive health, reduce inflammation, boost immune health, protect the kidneys and liver, kill bacteria. It promotes proper digestion, improves circulation and healing time and helps maintain the homeostasis of the endocrine system.

Potent antioxidants in Triphala include tannins, gallic acid, ellagic acid, chebulinic acid, flavonoids (quercetin and luteolin), saponins, anthraquinones, amino acids, and fatty acids.

Wormwood

Artemisia absinthium (leaves)

Wormwood is one of over 500 species of Artemisia - an herb known for its anti-cancer properties.

Wormwood is a strong anti-[parasitic](#), anti-fungal, and antioxidant.

As stated previously, parasitic infections and fungal overgrowth can both be root causes of allergic conditions.

Even with the addition of anti-inflammatory and immune boosting herbs, the body will continue to have allergic symptoms if the root cause, such as parasite or fungus, is still present.

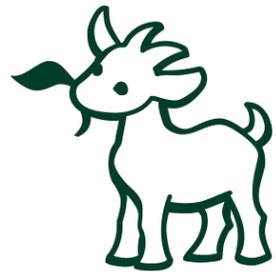

Marshmallow

Althaea officinalis (Root)

Marshmallow Root helps regulate mucous production.

Mucous provides a protective film over inflamed mucosa. A soothing mucus layer can reduce irritation of the digestive and respiratory systems, allowing these tissues the ability to heal and regenerate faster. Mucous also provides a defense mechanism against additional dietary or environmental injury.

Brahmi

Bacopa monnieri (stems and leaves)

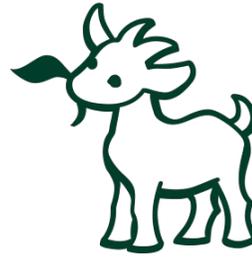

Also called Bacopa, Brahmi has been widely researched for its effects on brain health. It has been found to help improve:

- Anxiety,
- Stress,
- Depression, and
- Mental Fatigue

Itching, scratching and allergies can be anxiety and stress inducing. Over time, stress and anxiety can cause mental fatigue and depression.

Brahmi has the ability to improve tolerance to these annoyances while the body takes time to heal.

Meadowsweet

Filipendula ulmaria (young leaves)

Studies on the anti-inflammatory benefits of Meadowsweet showed that Meadowsweet (in herbal, non-extract form) can decrease inflammatory responses to allergy stimulants and slows the time it takes for the body to have an inflammatory response.

Yucca

Wild harvested Yucca Schidigera

Yucca is a rich source of steroidal saponins. It has the ability to reduce the inflammatory response.

Yucca also inhibits the production of inflammatory nitric oxide.

Yucca is also as effective at killing giardia protozoa as Metronidazole**.

Yucca phenolics are free radical scavengers and suppress ROS (reactive oxygen species) which stimulate inflammatory responses.

*Not to be confused with Yuca, which is from cassava and is high in cyanide.

**Metronidazole is not approved for use in animals and the product insert states that it causes cancer.

s o l u t i o n s
PET PRODUCTS

Frankincense

Boswellia serrata

Frankincense resin has an analgesic, tranquilizing and antibacterial effect. It reduces inflammation by inhibiting [leukocyte elastase](#) and degrading glycosaminoglycans. It prevents the release of leukotrienes, thus having an anti-inflammatory effect in ulcerative colitis, irritable bowel syndrome, bronchitis and sinusitis.

Research shows that Frankincense has a protective effect against pro-inflammatory cytokines.
