

Disclaimer

- As with virtually all supplements, statements made have not been approved by the FDA.
- These products are not intended to cure, treat, diagnose or otherwise benefit your pet - per regulation, only pharmaceutical products are permitted to make that claim.
- Results may vary according to the animal's diet and lifestyle.
- These products are not to be used in lieu of, but as a support to, proper veterinary care.
- The amount of time a product must be used before seeing results is heavily dependent on your pet's existing diet and current condition. Generally speaking, minimal results begin to occur between 1 dose and 3 weeks. Maximum results are often not achieved for about 3 months.
- In severe conditions, or conditions where the pet is dependent solely on the effects of the supplement because the diet has not been improved to eliminate processed foods, this time may increase greatly.
- The cleansing response, aka healing crisis, is a process in which your pet's body begins releasing the toxins that have built up in their system over the years. The speed and severity of the cleansing response will vary by individual pet according to their age, diagnosis, lifestyle, severity of symptoms, etc.
- Symptoms of a cleansing response may include: increased shedding, panting, lethargy, excessive water consumption, slightly loose stools, dermatitis, and self-fasting. These symptoms are temporary and transitory. Not every pet will have a cleansing response.

Sourcing is Key

Individually Hand-crafted

Fair Trade for Life Certified Ingredients

Non-GMO

Certified Organic

Kosher

Hand-Selected Harvesting

Zero-Waste Certified Business Ingredients

Small Farmer Supportive

No Artificial or Natural Colors or other unnecessary junk

NO Fillers, Ever!

NO Preservatives

NO Binders

No Nuts, No Soy, No Wheat, No Corn... No nothing but medicinal herbs!

Turmeric & Ginger

The blend of these two herbs has been shown in research to:

- Support liver health,
- Increase fat metabolism (thus helping with weight management, gallbladder buildup, and fatty lipomas),
- Decrease inflammation (via Cox2 pathways),
- Thin blood (thus assisting with clots but also making it unsafe for use prior to surgery) and
- Potentially moderate insulin and glucose levels (making it beneficial for diabetic conditions).

Ingredients

100% Organic Turmeric Root, 100% Organic Ginger Root

TURMERIC ROOT

Curcuma longa

The primary healing constituent in Turmeric is its high level of curcuminoids. Curcuminoids are capable of effectively reducing chronic pain and inflammation. There is an overall lack of treatment options for neuropathic (chronic) pain. This could be because there is a poor understanding in the scientific community about the pathological mechanisms that cause chronic pain.

Science has identified that Turmeric functions as a COX2 inhibitor. COX2 (or cyclooxygenase 2) has been linked to inflammation, cytokine storms, and the release of damaging prostaglandins. Because of its ability to control these trouble making chemicals it also has a positive effect on multiple cancers (colon, breast, lung, skin and intestinal).

Turmeric also functions as a potent blood thinner. Assisting the blood to flow more efficiently helps improve heart, kidney and blood health.

Since Turmeric can emulsify fat, it has the ability to clear sludge out of the gallbladder, improve liver health, improve metabolism and help with weight loss. It has also been shown to assist with glucose regulation, thus improving metabolism and mitigating effects of metabolic diseases such as obesity, diabetes and cancers.

GINGER ROOT

Zingiber officinale

Chemical compounds found in Ginger, called gingerols, inhibit multiple cytochrome drug metabolism pathways. This same metabolic action can prevent the liver from allowing curcuminoids to be excreted quickly. The more time that the curcuminoids in Turmeric are available in the digestive tract and liver, the longer and more effectively they can elicit their beneficial effects. As such, Ginger improves the benefits of the curcuminoids in Turmeric by as much as 2,000%.

Consuming this blend with a ketogenic or high fat diet will also improve its effectiveness by allowing the blends properties to bypass the liver and go directly into the bloodstream.

The combination of Ginger with Turmeric improves their ability to:

- Reduce high levels of certain hormones (which can also help reduce obesity),
- Inhibit cytokine/adipokine expression (thus reducing inflammation and pain),
- Inhibit ROS-generating enzymes (thus reducing inflammation and the progression of some diseases),
- Decrease anti-apoptotic genes (which may suppress cancerous tumor promotion)

*Black Pepper functions similarly to Ginger. We just didn't think most dogs would eat enough Black Pepper to make a difference in this blend so we picked Ginger.

Important Note About Plastics

At Solutions, eco-consciousness is of primary concern to us. Of course, the ability of a package to biodegrade is of utmost importance to us. In addition, we chose our packaging so it's biodegradable, but also so that we feel good about using Turmeric in our various blends.

Turmeric emulsifies fats and plastics. Research shows that if Turmeric is stored in low density (bendable) plastic it will "eat" the plastic within 30 days. You can actually feel this process at the end of 30 days because the package will feel sticky. High density (hard) plastics take longer to degrade only because they are thicker... not because they aren't degrading.

Of course, we recognize that as these plastics degrade, they will end up floating around in the product which will then be consumed by your pet.

Research shows that phthalates (plastic components) can damage the liver, kidneys, lungs and reproductive system. This is not a risk we're willing to take with your pets' health!
